TECHNICAL STACK

TypeScript / Java / C++
Node.js / Spring Boot
PostgreSQL / Redis
AWS / Docker / Kubernetes
REST / event-driven systems

EDUCATION

National University of Singapore
B.Comp. in Computer Science, 2017

LANGUAGES

English - fluent
Mandarin - conversational

PROFILE

Singapore-based backend engineer building high-throughput hiring, payments, and workflow platforms. Focuses on reliable APIs, typed service boundaries, observability, and pragmatic automation.

EXPERIENCE

- Merlion Systems Pte. Ltd.** Singapore
Senior Software Engineer 2023 - Present
 - Led migration of a resume-processing API from a monolith to independently deployable services, reducing release coupling.
 - Designed typed event contracts and idempotent workers for document ingestion and downstream enrichment.
 - Added structured tracing and service-level dashboards used during production incident reviews.
- Software Engineer** 2020 - 2023
 - Built Java and TypeScript services for customer onboarding and internal workflow automation.
 - Introduced contract tests for critical partner integrations and improved CI feedback for backend teams.

ENGINEERING PRACTICES

API contract design
Code review and mentoring
Incident response
Performance profiling
CI/CD quality gates
Architecture documentation

SELECTED TOOLS

GitHub Actions
OpenTelemetry
Grafana
Terraform
JUnit / Vitest
Linux tooling

INTERESTS

Developer tooling, document processing, distributed systems, and reproducible software experiments.

EARLIER EXPERIENCE

Lion City Commerce

Singapore

Software Engineer

2017 - 2020

- Developed order-management APIs and asynchronous reconciliation jobs for a regional e-commerce platform.
- Worked with product and operations teams to replace spreadsheet-heavy processes with auditable internal tools.
- Improved batch-processing reliability by adding retry policies, metrics, and failure summaries for operations teams.

SELECTED PROJECTS

Document Pipeline Benchmark

Created a reproducible fixture suite for evaluating PDF text extraction, reading order, hyperlinks, and OCR routing.

Service Reliability Toolkit

Built reusable health-check, tracing, and deployment templates for small backend services used across internal prototypes.

ADDITIONAL CONTRIBUTIONS

- Mentored junior engineers on debugging production issues and writing smaller, reviewable changes.
- Documented migration playbooks so service ownership could transfer without relying on undocumented team knowledge.
