CORE SKILLS

SQL / Excel / Power BI
Python for analysis
Product analytics
Experiment design
Requirements mapping
Stakeholder reporting

EDUCATION

University of Information Technology
B.C.Sc., Information Science, 2019

LANGUAGES

Burmese - native
English - professional

SUMMARY

Myanmar-based analyst working across product operations, reporting, and data quality. Experienced in turning operational questions into measurable metrics and clear decision support.

WORK HISTORY

Ayeyar Digital Services	Yangon
Product & Data Analyst	2022 - Present
- Built recurring product dashboards for activation, retention, support volume, and operational turnaround time. - Partnered with engineering to define event instrumentation and resolve inconsistent metric definitions. - Automated monthly reporting checks and documented data-quality exceptions for business stakeholders. - Created lightweight experiment readouts that separated observed results from assumptions and follow-up questions.	

METHODS

Cohort analysis
Funnel analysis
Data validation
Metric definitions
Operational research
Dashboard QA

TOOLS

PostgreSQL
Power BI
Google Sheets
Jupyter
Git
Issue trackers

COMMUNITY

Volunteer data mentor for fictional community workshops introducing spreadsheet analysis and dashboard fundamentals.

EARLIER EXPERIENCE

Shwe Market Technologies

Yangon

Operations Analyst

2019 - 2022

- Analyzed merchant onboarding bottlenecks and produced weekly operational scorecards.
- Created SQL-based reconciliation checks that highlighted incomplete records before finance review.
- Prepared concise decision notes combining quantitative findings with frontline operational feedback.
- Maintained shared metric definitions so operations and product teams used consistent reporting logic.

SELECTED ANALYSIS

- Mapped a multi-step onboarding funnel and identified stages where incomplete documentation caused repeat handling.
- Compared support categories across monthly cohorts and proposed dashboard changes that made recurring issues easier to spot.
- Reviewed dashboard calculations against source queries and documented exceptions before stakeholder distribution.

WORKING STYLE

Prefers explicit metric definitions, reproducible queries, short written summaries, and clear separation between measured evidence and interpretation.
