

SOMCHAI RATTANAKUL

WELDER / METAL FABRICATOR / MAINTENANCE TECHNICIAN

Samut Prakan, Thailand | +66 80 000 1472 | somchai.rattanakul@example.com | Thai citizen | Available for shift work

PROFESSIONAL SUMMARY

Hands-on welder and metal fabricator with more than 9 years of experience supporting manufacturing, food-processing, warehouse, and construction environments in Thailand. Experienced with MIG/MAG, SMAW (stick), basic TIG stainless-steel work, cutting, grinding, fit-up, jig work, equipment repair, and preventive maintenance. Comfortable reading shop drawings, taking measurements, preparing material, checking weld appearance and dimensions, and coordinating with Thai and international supervisors. Strong record of shift attendance and safety compliance. Used to hot-work permits, confined work areas, production deadlines, and physically demanding jobs. Seeking a stable welding, fabrication, maintenance, or plant technician position in Thailand or elsewhere in Southeast Asia.

CORE SKILLS

Welding	MIG/MAG (GMAW), SMAW/arc welding, basic TIG (GTAW), tack welding, fillet and butt joints, vertical and overhead practice
Fabrication	Steel and stainless fit-up, measuring, marking, cutting, drilling, grinding, bevel preparation, jigs, brackets, frames, handrails and guards
Maintenance	Minor machine repair, bearing/guard replacement support, conveyors, pumps, motors, workshop repairs, preventive maintenance assistance
Tools	Angle grinder, cut-off saw, magnetic drill, bench drill, hand drill, oxy-fuel cutting, plasma cutter, measuring tape, vernier caliper, spirit level
Safety	PPE, hot-work permit procedures, fire watch, lockout/tagout awareness, housekeeping, lifting awareness, toolbox talks, 5S
Work Style	Shift work, overtime, production support, team coordination, job handover, basic work records, material control

EMPLOYMENT HISTORY

Senior Welder / Fabricator Eastern Process Systems Co., Ltd. <i>Bang Phli, Samut Prakan, Thailand</i>	Apr 2022 - Present
- Fabricate carbon-steel and stainless-steel frames, machine guards, pipe supports, platforms, access ladders, handrails, brackets and small process-equipment parts based on drawings and supervisor sketches. - Perform MIG/MAG welding for general fabrication and SMAW for repair and site work; use TIG for selected stainless-steel thin sections and finishing jobs under senior technician guidance. - Measure, mark, cut, drill, grind and fit components before welding; check squareness, alignment, overall dimensions and hole positions before sending completed items for installation or painting. - Support installation and repair work at customer factories around Samut Prakan, Chonburi and Rayong, including shutdown periods requiring night shifts and overtime. - Complete daily hot-work checks, inspect cables and welding leads, keep fire extinguisher/fire blanket nearby, and coordinate fire-watch requirements when working outside the workshop. - Help train 3 junior helpers on basic welding setup, safe grinding, material handling, tack sequence and workshop housekeeping. - Reduced rework on repeated machine-guard jobs by using simple jigs and a measurement checklist before final welding; supervisor reported noticeably fewer fit-up corrections during installation. - Assist maintenance technicians with conveyor frame repairs, broken brackets, damaged guards, trolley repairs and urgent production-line welding when machines are stopped.	
Welder / Maintenance Helper Siam Fresh Foods Manufacturing Co., Ltd. <i>Lat Krabang, Bangkok, Thailand</i>	Jan 2019 - Mar 2022
Worked in the engineering maintenance team of a chilled and frozen food factory, supporting daily repairs and planned maintenance in production, packing, warehouse and utility areas.	

- Welded stainless and mild-steel guards, carts, racks, drain covers, work tables, pipe brackets and replacement support frames; carried out grinding and finishing where smooth, clean surfaces were required.
- Assisted technicians during conveyor belt replacement, roller replacement, motor changes, pump maintenance, bearing work and alignment checks; prepared tools and cleaned equipment before restart.
- Responded to breakdown calls from production supervisors and helped isolate damaged mechanical parts so repairs could be completed quickly and safely.
- Followed hygiene-zone rules, tool-control procedures, PPE requirements and cleaning instructions for food-production areas. Learned to avoid leaving metal filings, welding rods or loose hardware in controlled zones.
- Kept simple handwritten maintenance notes for completed workshop jobs, materials used and unfinished tasks for the next shift.
- Participated in annual shutdown maintenance and weekend repair work, regularly working 10-12 hour shifts during major maintenance periods.

Welder / Steel Fabrication Worker | Chao Phraya Steel & Engineering

Jun 2016 - Dec 2018

Nonthaburi and Bangkok project sites, Thailand

- Fabricated and installed steel gates, awnings, stair railings, fencing, roof supports, equipment stands and general structural items for small factories, warehouses, shops and residential projects.
- Used SMAW extensively for site welding and MIG in the workshop; prepared joints with grinder, cut steel using chop saw and oxy-fuel equipment, and corrected fit-up problems on site.
- Loaded and unloaded steel sections, moved fabricated parts with team members, set up work areas, and worked from ladders or temporary platforms following supervisor instructions.
- Read basic dimensions from hand drawings and site measurements; checked level and plumb before final welding and bolting.
- Worked with crews of 4-8 people and sometimes stayed at provincial sites for several days until installation was completed.

Workshop Helper / Junior Welder | Metro Metal Works

May 2014 - May 2016

Bang Khae, Bangkok, Thailand

- Started as a general workshop helper preparing materials, cleaning steel, holding parts for fit-up, moving gas cylinders with a trolley, sweeping work areas and assisting experienced welders.
- Progressed to basic tack welding and SMAW on non-critical frames after in-house practice and supervisor approval.
- Learned correct use of tape measure, square, grinder, drill press and common workshop hand tools, plus basic electrode storage and machine cable checks.
- Helped fabricate shelving, carts, sign frames, gates and repair jobs for local customers.

SELECTED PROJECTS & PRACTICAL EXPERIENCE

- Food-factory conveyor upgrade (2024): fabricated stainless support frames and guards, modified brackets during installation, and supported overnight commissioning work in Chonburi.
- Warehouse safety improvement project (2023): produced approximately 40 protective bollards, guard sections and pedestrian barriers from repeated drawings and site measurements.
- Production line relocation (2022): cut and modified existing frames, fabricated new machine bases, and supported reinstallation during a planned factory shutdown.
- Cold-storage maintenance work (2020-2021): repaired racks, carts, protective rails and equipment guards in low-temperature areas using task-specific PPE and short work rotations.
- Commercial steel fabrication (2016-2018): completed gates, roof frames, stairs, handrails and fencing across multiple Bangkok-area construction and renovation jobs.

TRAINING & CERTIFICATIONS

Training / Certification	Provider	Year
Welding Skills Development - SMAW & GMAW	Private vocational training center, Samut Prakan	2022
Basic TIG Welding for Stainless Steel	Employer internal workshop / supervised practical training	2023
Safety for Hot Work and Fire Watch	Employer annual safety training	2024, refreshed 2025
Basic Lockout / Tagout Awareness	Siam Fresh Foods Manufacturing	2021
Forklift Safety Awareness (non-licensed operator training)	Employer toolbox and warehouse safety program	2020
First Aid Awareness	Workplace safety day program	2024

EDUCATION

Vocational Certificate - Industrial Mechanics / Metal Work (Certificate Level) | Bangkok Technical Training Institute (fictional sample institution), Bangkok

Completed 2014. Coursework included workshop safety, basic welding, machine tools, technical drawing, measurement, mechanical maintenance and industrial practice.

LANGUAGES

- Thai - Native
- English - Basic working level; can understand common workshop terms, tool names, safety instructions, simple drawings and short supervisor instructions
- Lao - Basic conversational understanding from coworkers and site work

ADDITIONAL INFORMATION

- Available for rotating shifts, night work, weekends and reasonable overtime.
- Comfortable with factory, warehouse and construction-site environments; able to work standing for long periods and handle normal workshop material movement as part of a team.
- Valid Thai motorcycle and private-car driving licences (synthetic detail for testing).
- Open to work in Bangkok, Samut Prakan, Chonburi, Rayong and other industrial areas; relocation within Southeast Asia can be considered depending on employer requirements.
- Expected salary: negotiable based on shift allowance, overtime, location and job responsibilities.
- References: available on request.
